

Backend Developer

COMPANY OVERVIEW

Imagine needing a medication to a curable disease only to find that your local pharmacy is out of stock. Even worse, the pharmacy has no idea when they will be resupplied since the data is not integrated in any way with their supplies.

Reliefwatch tracks inventory stock levels, diseases cases, and other last-mile data for organizations in the developing world. We help reduce stock-outs and minimize expirations of essential supplies.

KEY STATS

- Currently working in five countries: Honduras, Nicaragua, Panama, Kenya, and Uganda
- Seven-person team based out of the Chicago Innovation Exchange in Chicago, IL
